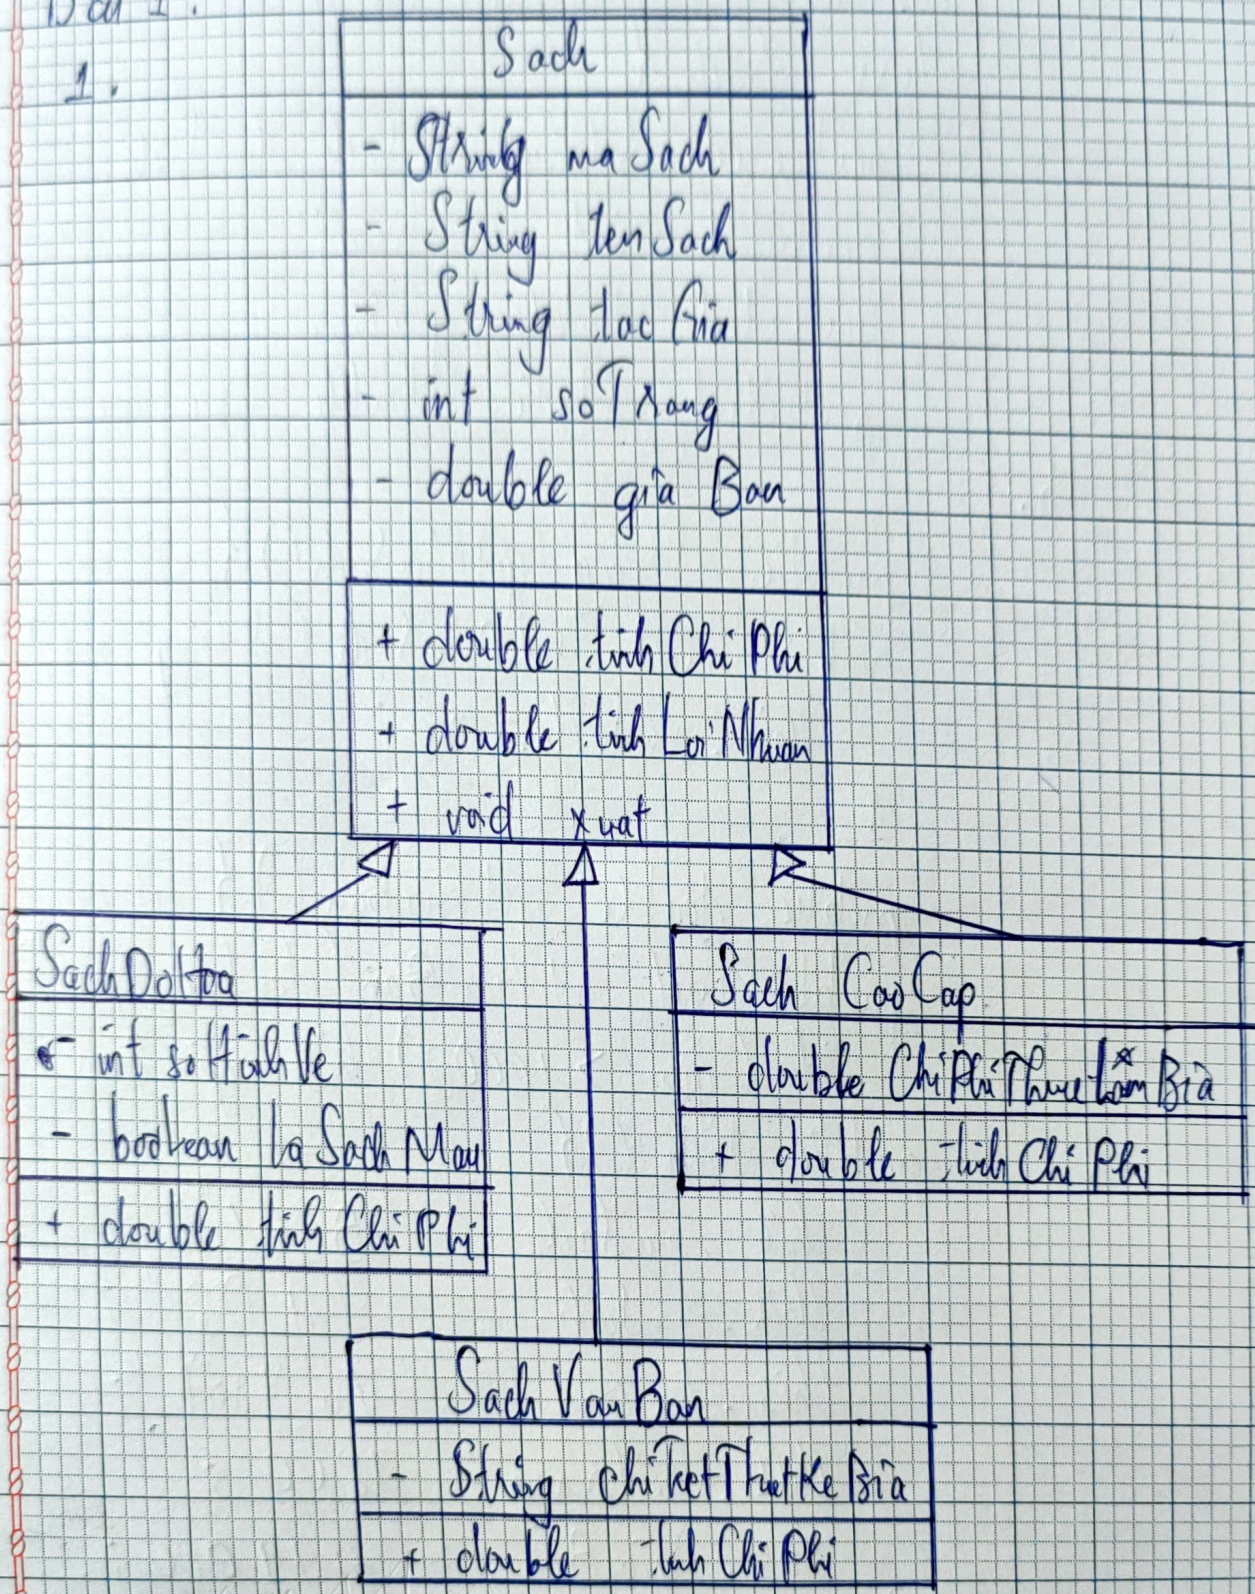
Bài 1:

1.



2. import java.util.Scanner;

```
class Sach {
    protected String maSach, tenSach, tacGia;
    protected int soTrang;
    protected double giaBan;
    protected static double tiLeThue = 0.03;
```

b.

```
    public String getMaSach() { return maSach; }
    public void setMaSach(String ma) {
        this.maSach = ma;
    }

    public double getGiaBan() { return giaBan; }
    public void setGiaBan(double gia) {
        if (gia > 10000) this.giaBan = gia; }
```

c.

```
    public Sach() {
        this.maSach = "B001";
        this.tenSach = "Tất Dạ";
        this.tacGia = "Vu Triết";
        this.soTrang = 1800;
        this.giaBan = 499000;
    }
```

d.
```
public void xuat(){
    System.out.println("Ma: " + maSach +
    ", Ten: " + tenSach + ", tac gia: " + tacGia
    + ", so Trang: " + soTrang + ", Gia ban: "
    + giaBan);
}
```

e.
```
public double tinhChiPhi(){ return 0; }
public double tinhLoiNhuan(){
    double thue = giaBan * tiLeThue;
    double nhuanBut = giaBan * 0.2;
    return giaBan - tinhChiPhi() - thue - nhuanBut;
}
}
class SachDoHoa extends Sach {
    int soHinhVe;
    boolean laSachMau;
    public double tinhChiPhi(){
        double chiPhiVe = laSachMau ? soHinhVe
        * 2000 : soHinhVe * 1200;
        double phiBaoBia = 50000;
        double phiInTrang = soTrang * 200;
```

```
    return chiPhiVe + phiBaoBiaT + phiLopThem;
    }
}
```
