BT5:

```
interface Moveable {
    void moveUp();
    void moveDown();
}

class MoveablePoint implements Moveable {
    int x, y, speed;
    ~~Moveable Point~~
    MoveablePoint(int x, int y, int speed){
        this.x = x; this.y = y;
        this.speed = speed;
    }
    public void moveUp(){ y -= speed; }
    public void moveDown(){ y += speed; }
    public String toString(){
        return "Point at (" + x + "," + y + ")";
    }
}

class MoveableCircle implements Moveable {
    int radius;
    MoveablePoint center;
```

```
MoveableCircle (int x, int y, int speed, int radius)
{
    this.center = new MoveablePoint (x, y, speed);
    this.radius = radius;
}
public void moveUp () { center.moveUp (); }
public void moveDown () { center.moveDown (); }
public String toString () {
    return "Circle at" + center.toString ()
    + "radius" + radius;
}
}
public class Main {
    public static void main (String [] args) {
        Moveable p = new MoveablePoint (0, 0, 5);
        p.moveUp ();
        System.out.println (p);
        Moveable c = new MoveableCircle (10, 10,
          2, 50);
        c.moveDown ();
        System.out.println (c);
    }
}
```
